

A QUANTA SERVICES COMPANY

NEWTON ROAD SUBSTATION

SERVICE: Substation

LOCATION: Georgia

DATE: 2024

SCOPE: Service Electric crews safely completed their work on the Newton Road Substation while facing an accelerated timeline and obstacles surrounding access to outside materials.

The Newton Road Substation project in Georgia, was a last-minute addition to the schedule, but that didn't stop our crews from stepping up to the challenge. Initially planned for early 2025, the customer accelerated the timeline, requiring completion by the end of 2024. With material shortages, equipment availability concerns, and the need for seamless coordination, the project demanded an all-hands-on-deck effort.

Three Service Electric crews—led by Dakota Vordenberg, Brad Webster, and the host crew—worked long hours, weekends, and through unpredictable weather to ensure the job was completed safely, efficiently, and on time. The teams arrived on-site in August to find multiple contractors already working on grading, concrete installation, and dead-end structures. Through regular communication and coordination, the teams minimized disruptions and seamlessly took over the site once preliminary work was finished.

With time constraints pressing, our crews went the extra mile—literally. To keep the project on track, Service Electric sent a convoy of seven trucks to pick up critical materials instead of relying on their delivery. When storms hit that flooded nearby roads and limited access, Service Electric was one of the only contractors to push through and keep working.

Despite these obstacles, the crews delivered a completed substation one full week ahead of schedule—a testament to Service Electric's ability to adapt, problem-solve, and get the job done. The station was energized the following week without issue, and the customer repeatedly praised our commitment, teamwork, and willingness to tackle any challenge head-on.

A huge thank you to Dakota, Brad, and their crews for their dedication and teamwork. Our greatest strength is the familylike bond we build, where support is always just a call away. This project showcased that spirit, proving that no challenge is too big when we work together.
